

JAKE 800

JAKE 800 Mounting Kit has been designed to mount flange fastening cranes with gross lifting moment up to 80 kNm on wheel tractors. Yet the **JAKE 800** provides a great opportunity to mount a heavy harvester crane on the tractor.

Comparing with the crane mounted on a trailer, the **JAKE 800** provides the advantage to use the full loading capacity of the trailer as the weight of the crane doesn't fall on the load but on the tractor increasing pulling power of the tractor. The tractor equipped with a **JAKE Boom Support** gains pulling power even more by increasing the weight of the tractor on account of the crane held to the front of the tractor.

The **JAKE 800** Mounting Kit makes using the tractor versatile because the crane mounted on the tractor can be combined with other devices and equipment connected with a 3-point linkage.
