

JAKE 800 Tilt

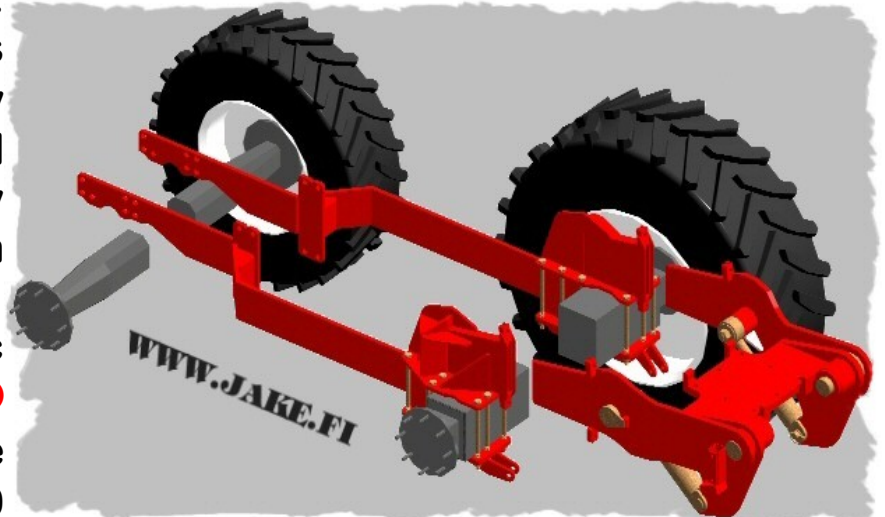

JAKE 800 Tilt is enough strong for cranes whose lifting moment is up to 80 kNm.

JAKE 800 Tilt has been designed for heavy harvester cranes and moreover it is very valuable to combine with loading cranes.

With the help of hydraulic cylinders **JAKE 800**

Tilt allows to tilt a crane 5 degrees forward and 20

degrees backward. This provides a remarkable opportunity for harvesters to work more effectively without shifting a tractor and for loading cranes to get the advantage to reach "the last metre".

Tractor models for **JAKE 800 Tilt** are presented on the website
